Experiment 6

AIM: Create Product Catalog Application using ASP.NET MVC Architecture (Controllers,Models, Views, Routing)

Source:Practical 6.cs

GitHub URL : https://github.com/Henypatel08/.NET-Practical.git

Code:-

RouteConfig.cs

```
using System.Data.SqlClient;
using System.Web.Mvc;
using System.Web.Routing;

namespace Practical6
{
   public class RouteConfig
   {
      public static void RegisterRoutes(RouteCollection routes)
      {
         routes.IgnoreRoute("{resource}.axd/{*pathInfo}");

         routes.MapRoute(
            name: "Default",
            url: "{controller}/{action}/{id}",
```

```
            defaults: new
            {
                controller = "Product",
                action = "Index",
                id = UrlParameter.Optional
            }
        );
    }
  }
}
```

ProductController.cs

```
using System.Collections.Generic;
using System.Linq;
using System.Web.Mvc;

namespace Practical6.Controllers
{
  public class ProductController : Controller
  {
    public ActionResult Index()
    {
      List<Product> products = new List<Product>()
      {
        new Product
        {
          ProductId = 1,
          ProductName = "Laptop",
          Description = "HP Victus",
          Price = 75000,
          Category = "Electronics"
        },
```

```
            new Product
            {
                ProductId = 2,
                ProductName = "Mobile",
                Description = "Samsung Mobile",
                Price = 80000,
                Category = "Electronics"
            },

            new Product
            {
                ProductId = 3,
                ProductName = "Headphones",
                Description = "Bluetooth Wireless Headphones",
                Price = 2500,
                Category = "Accessories"
            }
        };

        return View(products);
    }

    public ActionResult Details(int id)
    {
        List<Product> products = new List<Product>()
        {
            new Product { ProductId = 1, ProductName = "Laptop", Description =
"Victus Laptop", Price = 75000, Category = "Electronics" },
            new Product { ProductId = 2, ProductName = "Mobile", Description =
"Samsung Mobile", Price = 80000, Category = "Electronics" },
            new Product { ProductId = 3, ProductName = "Headphones", Description = "
Bletooth Wireless Headphones", Price = 2500, Category = "Accessories" }
        };

        Product product = products.FirstOrDefault(p => p.ProductId == id);
```

```
            return View(product);
        }
    }
}
```

Product.cs

```
namespace Practical6
{
    public class Product
    {
        public int ProductId { get; set; }
        public string ProductName { get; set; }
        public string Description { get; set; }
        public double Price { get; set; }
        public string Category { get; set; }
    }
}
```

Details.cshtml

```
@model Practical6.Product

<h2>Product Details</h2>

<p><b>Product ID:</b> @Model.ProductId</p>
<p><b>Product Name:</b> @Model.ProductName</p>
<p><b>Description:</b> @Model.Description</p>
<p><b>Price:</b> @Model.Price</p>
<p><b>Category:</b> @Model.Category</p>

<br />

@Html.ActionLink("Back to Product Catalog", "Index")
```

Index.cshtml

```
@model IEnumerable<Practical6.Product>

  <h2>Product Catalog</h2>

  <table border="1" cellpadding="10">
    <tr>
      <th>Product ID</th>
      <th>Product Name</th>
      <th>Description</th>
      <th>Price</th>
      <th>Category</th>
      <th>Action</th>
    </tr>

    @foreach (var item in Model)
    {
      <tr>
        <td>@item.ProductId</td>
        <td>@item.ProductName</td>
        <td>@item.Description</td>
        <td>@item.Price</td>
        <td>@item.Category</td>
        <td>
          @Html.ActionLink("Details", "Details",
            new { id = item.ProductId })
        </td>
      </tr>
    }
  </table>
```

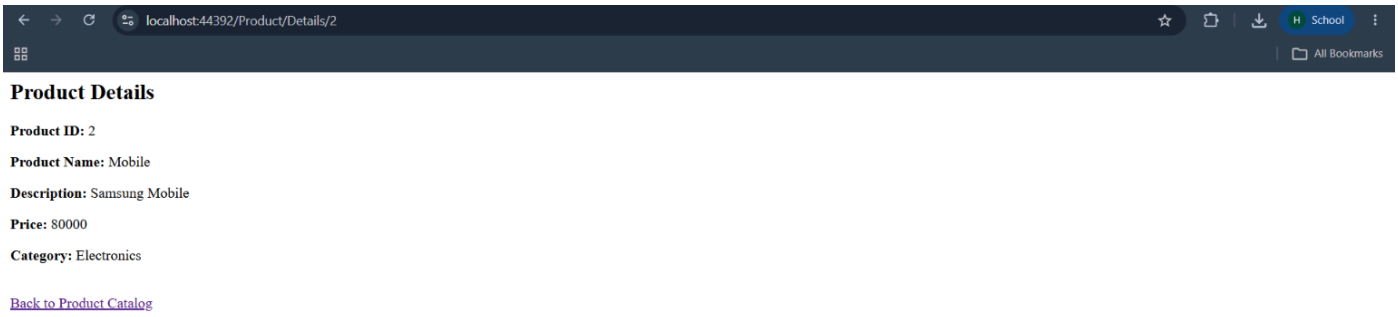

Global.asax

```
using System.Web.Mvc;
using System.Web.Routing;

namespace Practical6
{
    public partial class MvcApplication : System.Web.HttpApplication
    {
        protected void Application_Start()
        {
            AreaRegistration.RegisterAllAreas();
            RouteConfig.RegisterRoutes(RouteTable.Routes);
        }
    }
}
```

OUTPUT:-

localhost:44392/Product/Details/2
School
